

Vaibhav Srivastava

SQL Server Manager/Architect

 (91)-801-906-3311
 vaibhav.srivastava.mail@gmail.com

Nationality:	INDIAN
DOB:	01 Feb 1986
Father's Name:	Mr. Devendra Kumar Srivastava
Marital Status:	Married
US VISA B1/B2:	Yes

Skills & Expertise

Professional Summary

Experienced SQL Server Manager/Architect with a focus on MSSQL Database Management and a strong background in software development and team leadership. I specialize in database optimization, performance tuning, and data migration, ensuring efficient, secure, and scalable solutions for business-critical applications. Skilled in Python, .NET Framework, ETL processes, and cloud technologies. I bridge the gap between complex database systems and modern software practices. I lead teams using Agile, Scrum, and tools like JIRA to deliver high-quality projects on time. With a proven track record of mentoring teams, optimizing workflows, and fostering innovation, I drive business value through well-architected database solutions. I am committed to continuous learning and advancing my expertise in databases and cloud technologies.

Education

University of Rajasthan, Jaipur
2003-2007 – **68.51%**
Bachelor of Engineering, Information Technology

Rajasthan Board of Education, Ajmer
2003 – **62.92%**
Physics, Chemistry and Maths

Rajasthan Board of Education, Ajmer
2000 – **67.16%**

Experience

- Ability to translate business requirements into database design.
- Communicate with clients to ensure end-user information discrepancies resolved.
- Development of database and management tasks for new product launch.
- Data Operations, Created numerous simple to complex queries.
- Created and implemented database design solutions in collaboration with programming team.
- Analysed and optimized MS SQL Server production databases.
- Writing SSIS packages and deployment.
- Creating SSRS and Power BI reports.
- Managed & Handled team of 25+ excellent people.
- Involved in people management activities like hiring, appraisals and budgeting.
- Involved in architecting large database systems.

Domain Knowledge

- Accounting
- ERP
- Cruise Line
- Manufacturing
- Education
- FMCG
- CRM
- Healthcare
- Campaign Engineering
- Green & Clean Energy
- Stock Market
- Payments

Employment Journey:

Freelancing

Roles & Responsibilities so far, as:

- **IT Professional**

- **Foster Innovation:** Continuously seek opportunities to innovate, integrate new technologies, and drive the organization's technical vision forward.
- **Build a Positive Culture:** Cultivate a collaborative and inclusive environment where diverse ideas are valued, and creativity thrives.
- **Mentor and Lead by Example:** Share knowledge and lead with integrity to inspire teams to achieve both personal and professional growth.
- **Stakeholder Communication:** Act as the liaison between technical teams and business stakeholders, ensuring clear communication, project alignment, and realistic expectations.
- **Project Management:** Oversee the progress of multiple projects simultaneously, balancing technical requirements, timelines, and resource allocation using agile methodologies (Scrum/Kanban).
- **Risk Management:** Proactively assess risks associated with technology deployments, including security vulnerabilities, performance bottlenecks, and compliance challenges, and implement mitigation strategies.
- **Mentorship & Knowledge Sharing:** Provide mentorship and lead internal knowledge-sharing sessions, fostering an environment of continuous improvement and technical growth within the team.
- **Business Process Improvement:** Use technology to optimize and automate key business processes, improving efficiency, reducing costs, and driving measurable business outcomes.
- **Cross-Functional Collaboration:** Partner with marketing, sales, and customer support teams to ensure that the database architecture aligns with the organization's broader business goals.
- **Architect Scalable Solutions:** Design and implement scalable, secure, and efficient IT systems to meet both current and future business requirements.
- **Proactive Problem Solving:** Identify potential system bottlenecks and proactively suggest solutions to enhance operational efficiency and minimize downtime.
- **Technology Integration:** Integrate various third-party applications and APIs with internal systems to ensure seamless data exchange and process automation.
- **Evaluate Emerging Technologies:** Continuously evaluate new technologies (e.g., AI, machine learning, cloud services) to determine their potential impact and benefit to the organization.

- **People Manager**

- **Performance Management:** Conduct regular performance reviews and align individual career development plans with team and organizational goals.
- **Team Building:** Develop cross-functional teams, ensuring effective collaboration, communication, and a strong sense of shared purpose.
- **Conflict Resolution:** Identify and address interpersonal conflicts within the team, ensuring a healthy and productive work environment.
- **Resource Allocation & Optimization:** Ensure that the right people are assigned to the right projects based on skills, experience, and team dynamics.
- **Fostering Diversity & Inclusion:** Champion a diverse work environment by advocating for inclusive practices in hiring, team management, and professional development.

- **Database, Software - Developer/Manager/Architect**

- **End-to-End Architecture Ownership:** Define and oversee the complete lifecycle of database and software architecture, from initial design to deployment and continuous optimization.
- **Performance Optimization:** Regularly assess and fine-tune database queries, indexing strategies, and storage to ensure optimal performance and responsiveness.
- **High Availability & Disaster Recovery:** Design and implement high-availability solutions, including backup strategies, data replication, and disaster recovery plans to ensure zero-downtime operations.
- **Security & Compliance:** Ensure data privacy and security standards (e.g., GDPR, HIPAA) are adhered to, while maintaining secure access protocols for both internal and external users.
- **Cloud Migration Strategy:** Lead cloud database migration projects (e.g., from on-prem to AWS, Azure, or Google Cloud), ensuring smooth transitions with minimal disruption to business operations.
- **Advanced T-SQL Development:** Write complex T-SQL queries, stored procedures, triggers, and views to support business requirements and improve system performance.
- **Data Modelling & Optimization:** Develop and maintain normalized and denormalized data models, ensuring they support both transactional and analytical processing.
- **Database Automation:** Automate common database tasks such as backups, performance monitoring, and script deployments to reduce manual intervention and human error.
- **Change Management:** Manage database versioning and deployments in coordination with version control systems (e.g., Git, TFS) to ensure compatibility and stability across environments.

Projects Summary, best ones so far:

Project & Duration: Optimal Outcome	Duration: Jan'2024 - Now	Industry: Green & Clean Energy	Role: Associate Specialist(IC)	Tools/Technology Used: Java, SQL Server, Azure, Snowflake	Team Size: 10
--	------------------------------------	--	--	---	-------------------------

Developed a comprehensive Carbon Credit Dynamic Trading Web Application(ORM) that facilitates the buying, selling, and tracking of carbon credits. Integrated modules for close to real-time market analysis, user management, credit validation, and transaction history, ensuring transparency and efficiency. Implemented a dynamic pricing engine based on supply and demand, alongside automated carbon credit certification for compliance. Enhanced user experience with a responsive interface, and provided robust reporting tools for environmental impact assessment. This platform contributes to sustainability efforts by enabling organizations to offset carbon emissions effectively.

Project: Guest and Crew Apps(SRE Project)	Duration: Jan'2023 – Dec'2023	Industry: Cruise Line	Role: Lead SRE	Tools/Technology Used: .Net, Kubernetes, Postgres, Kafka & SRE Tools	Team Size: 10
--	---	---------------------------------	--------------------------	--	-------------------------

Led the Site Reliability Engineering (SRE) efforts for a comprehensive Cruise Line Guest and Crew Application, ensuring high availability, scalability, and performance. Managed critical infrastructure components, implementing automated monitoring, alerting, and incident response systems for seamless user experience. Optimized cloud-based services and containerized environments, leveraging Kubernetes for orchestration. Ensured smooth operation for both guest and crew modules, including real-time booking, itinerary management, and crew scheduling. Enhanced system resilience and reduced operational overhead through proactive capacity planning and performance tuning.

Project: Advantage	Duration: Aug'2021 – Jul'2022	Industry: Campaign Engineering	Role: Technology Manager	Tools/Technology Used: .Net, SQL Server, Tableau, Snowflake	Team Size: 22
-------------------------------------	---	--	------------------------------------	---	-------------------------

Spearheaded a targeted voter engagement campaign for the U.S. Presidential Elections, utilizing data-driven strategies to mobilize key demographics and increase voter turnout. Led cross-functional teams to develop and implement digital outreach tools, including social media campaigns, email marketing, and mobile applications. Involved with testing and analytics teams to optimize messaging, ensuring effective communication on key issues. Collaborated with political analysts to identify swing states and tailored outreach efforts accordingly. Managed real-time data collection and reporting to refine strategies throughout the election cycle, ultimately driving higher voter participation and awareness.

Project: Tesseract	Duration: Apr'2019 – Jul'2021	Industry: Healthcare	Role: Tech Lead Database	Tools/Technology Used: .Net, SQL Server, Elastic Search	Team Size: 07
-------------------------------------	---	--------------------------------	------------------------------------	---	-------------------------

Led multiple data-driven initiatives across industries, focusing on data collection, processing, and management. Managed Life Sciences data collection and Master Data Management systems, ensuring accuracy and compliance in handling sensitive healthcare professionals information(PII, Conferences, Research etc..). Oversaw data operations, technology implementation, optimizing compliance workflows and reporting. Involved in construction cost data collection, enabling real-time cost tracking and analysis for project efficiency. Applied strong data governance principles and optimized operational workflows, driving improved decision-making and scalability across platforms.

Project: Sherlock	Duration: Jul'2016 – Sep'2017	Industry: Cruise Line	Role: Database Developer	Tools/Technology Used: .Net, SQL Server, Third Party Face Recognition	Team Size: 05
------------------------------------	---	---------------------------------	------------------------------------	---	-------------------------

Developed a cutting-edge cruise line application integrating face recognition technology to personalize guest experiences. Implemented a system that detects guests' faces and displays their photos on nearby televisions based on their real-time location tracking through wearable bands. Leveraged location-based services to ensure accurate, seamless photo display on selected voyage, enhancing guest engagement and interaction. Utilized third party application for precise face recognition and optimized the app's performance to handle large volumes of photo data efficiently. This innovative solution enhanced customer satisfaction and created a unique, interactive experience for cruise passengers.
